Her carer has contacted triple zero after experiencing increasing RUQ abdominal pain for the last 2 days. Julia is currently taking 80mg daily of oral methadone as part of a long-term methadone maintenance program after a history of heroin addiction. Julia is also Hep C and HIV +ive and has had a previous episode of ascites and suffers from portal hypertension, chronic renal failure, and diabetes.</p> <p>Julia's carer has called triple zero after her normal pain relief medications are not working. Along with her methadone, she is currently taking Gabapentin 300mg bd, Naproxen 500mg bd, Sofosbuvir 400 mg/velpatasvir 100 mg/voxilaprevir 100 mg (Vosevi) 1 tablet daily for her Hep C and Dolutegravir 50 mg/abacavir 600 mg/lamivudine 300 mg (Triumeq) for her HIV. She often self-medicates with non-medicinal cannabis.</p> <p>Julia has expressed that she does not want to go to hospital and would like to remain at home. Calculate her breakthrough dose of pain relief.</p>	<p>Julia, a 48-year-old patient who identifies as female, is suffering from end stage liver failure secondary to former intravenous drug use. Her carer has contacted triple zero after experiencing increasing RUQ abdominal pain for the last 2 days.</p> <p>Julia is currently taking 80mg daily of oral methadone as part of a long-term methadone maintenance program after a history of heroin addiction. Julia is also Hep C and HIV +ive and has had a previous episode of ascites and suffers from portal hypertension, chronic renal failure, and diabetes.</p> <p>Julia's carer has called triple zero after her normal pain relief medications are not working.
